

UNIFIED SECURITY SERVICE (USS)

FREEDOM. VISIBILITY. PROTECTION. THE UNIFIED SECURITY SERVICE (USS) FROM CENSORNET FULLY INTEGRATES EMAIL SECURITY, WEB SECURITY, CLOUD APPLICATION SECURITY AND MULTI-FACTOR AUTHENTICATION FOR BOTH CENTRAL CONFIGURATION AND MANAGEMENT, AS WELL AS DATA VISUALIZATION AND REPORTING.

USS provides a 360 degree single pane of glass view across multiple critical solutions, simplifying security, architected specifically and equally for both enterprises and MSPs.

USS enables organizations to move away from the more expensive approach of running separate solutions in silos and allows security teams to effectively and efficiently manage core security defenses, in a way that reflects how modern enterprises work today. USS allows users the freedom to access the applications and data they need - regardless of device or location, whilst providing visibility for IT and protection for all.

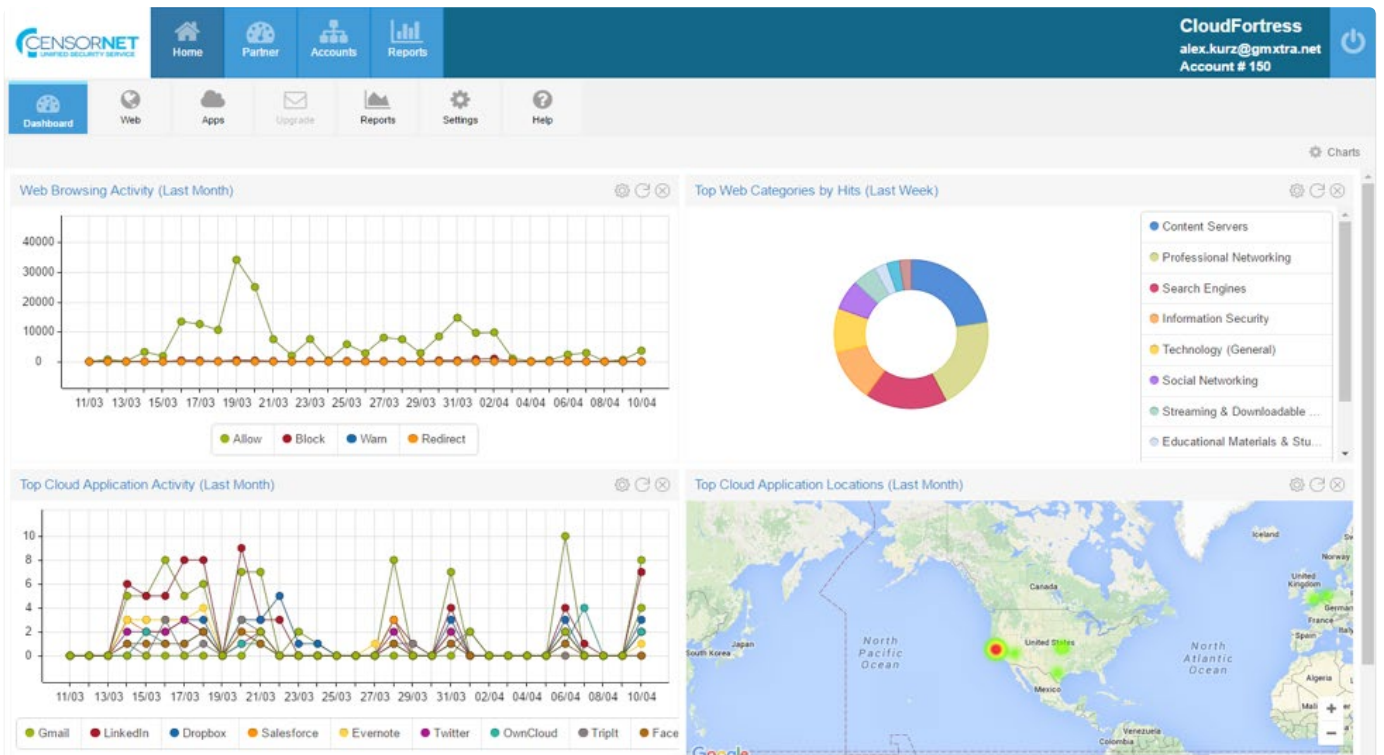

UNIFIED SECURITY SERVICE

- Fully integrates multiple core security services for simplified management with a single underlying shared identity store
- 100% cloud-based with the ability to specify data residency by region (US, UK, Europe) per account
- Multi-tenant and multi-tiered – ideally suited to organizations of any size as well as MSPs
- White label option – create separate ‘themes’ including logos and color palettes for different partners, customers, or business units
- REST API for inclusion of any element of the USS interface in virtually any other application
- Dedicated Partner Area includes self-service account provisioning, license management and billing reporting
- Assume admin for ‘child accounts’ with one click to perform actions on behalf of business units or customers
- Define unlimited administrator roles for flexible segregation of the admin function
- Comprehensive audit trail of all administrator activity
- Global Dashboard with additional individual dashboards for each service – layered, fully customizable workspaces for instant visibility of key metrics and trends
- Detailed reporting and analysis by an extensive list of drill-down criteria – including time, user, device, URL category, cloud application class, high risk actions, keywords, policy name, email volume, spam, malware and more
- Link reports to schedules to send via email as CSV or PDF attachment – also used for email alerts
- Auto-archiving of log data as well as scheduled reports
- Fully integrates with Microsoft® Active Directory (if required)
- Included with the purchase of any CensorNet service – add additional services at any time

GLOBAL DASHBOARDS & REPORTING

USS provides rich data visualization and reporting across all CensorNet services and an extensive set of attributes and criteria.

Each administrator has their own Global Dashboard with selectable charts and widgets and customizable layout. Service specific dashboards supplement the Global Dashboard for service-centric views.

Detailed analysis and reporting is available by time, user, device (hostname and MAC address), URL category, web category, cloud application class, cloud app name, cloud app action, keyword (e.g. filename, comment, login details), policy name, risk level, email direction, delivery status (delivered, spam, virus), outcome (block or allow).

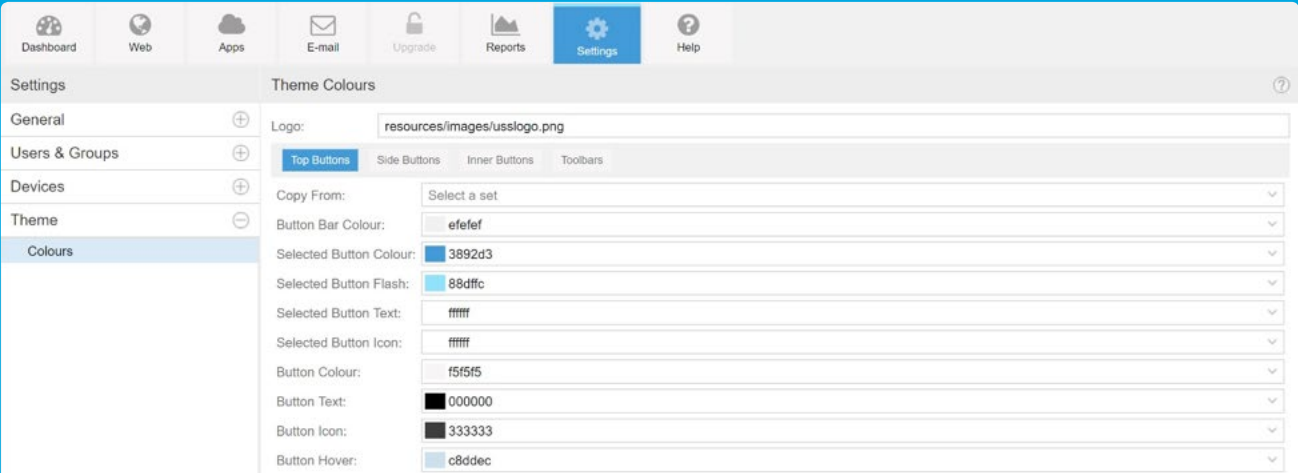

To optimize storage and reporting speeds logs are auto-archived based on individual service retention periods. As standard, these are 90 days for Email and Web Security and 1 year for Cloud App Security and MFA. Archives can be downloaded on-demand in CSV format.

Whether audit data is required purely for visibility or for more formal attestation of compliance with internal policies or external standards, regulations and legislation, USS will provide the evidence needed.

MULTI-TENANT AND MULTI-TIERED

USS is 100% cloud-based and multi-tenant, delivered from data centers located in the US, UK and mainland Europe. To address data residency concerns, region is selected at the time of account provisioning. Customer data is segregated using separate database schemas and multiple layers of encryption - each tenant has a unique key ensuring their data is isolated and all access to the USS portal is over HTTPS.

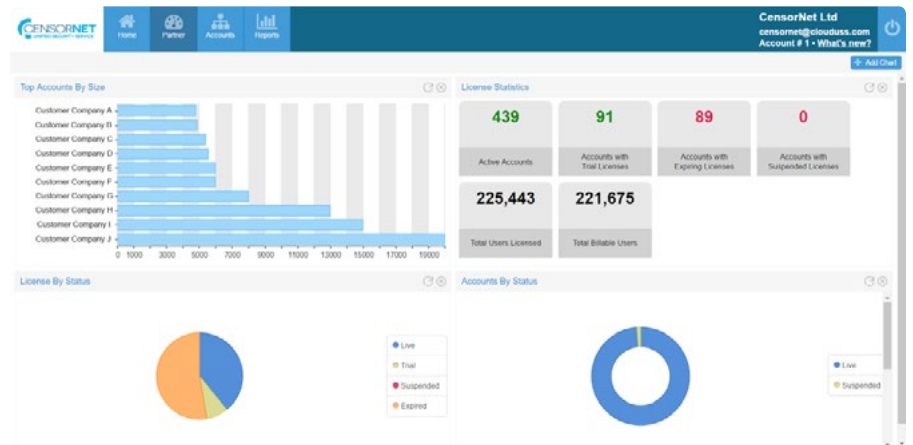

The ability to create 'child accounts' within the portal is a powerful feature that makes USS ideal for large multi-national organizations or organizations with multiple brands, as well as perfectly suited to MSPs. Themes that include logo and full color palette can be applied to each account for different business units, partners or customers. Each account has a separate set of policies for flexibility in meeting local legislative and regulatory compliance requirements, taking into account differences in data protection and privacy laws.

Themes allow MSPs to easily white label USS and - using an extensive API - embed any element available in the portal within their own applications.

PARTNER AREA

A dedicated Partner Area within USS provides self-service tools for IT teams or MSPs to manage accounts. Features include new account provisioning, service and license management, ability to suspend or delete an account, search, as well as reporting on service usage and license status.

Where there are multiple tiers within the account hierarchy there is also the option to select whether the Partner Area is visible within the account – so that a regional HQ can manage different in-country businesses, or a reseller can manage their end users.

EASE OF ADMINISTRATION

USS provides the flexibility to create unlimited admin roles based on over 100 access controls with the option to protect administrator accounts with two-factor authentication. The admin function can be split to match organizational requirements, segregating account and agent provisioning, from viewing web usage reports, from maintaining URL categories or managing the Cloud Application Catalog.

Enterprises can delegate admin activities to local or regional teams whilst MSPs can reflect responsibilities within SLAs or use role based access control to enable value added services.

Parent accounts can assume the administrator role for a child account to manage settings, policies and rules across all services, or troubleshoot issues, on behalf of business units or customers.

IDENTITY INTEGRATED

Within USS is a single identity store that is shared across Email Security, Web Security, Cloud Application Security and Multi-Factor Authentication.

For organizations with Microsoft® Active Directory there are options for Local Sync or Cloud Sync. Local Sync uses a locally installed USS AD Connector Service (agent) which pushes objects to the CensorNet Cloud. Cloud sync uses a LDAP or LDAPS connection to pull objects. Local Sync has the additional benefit of not requiring any firewall rule changes. Both methods require a read only service account in AD.

For those organizations that do not have AD, local usernames will still be captured where possible.

UNIFIED SECURITY SERVICE

A 360-degree view across web, email and cloud applications at a single glance.

CLOUD APPLICATION SECURITY

Secure adoption of cloud services and applications in your organization.

MULTI-FACTOR AUTHENTICATION

Keep your systems and data safe with multi-factor authentication.

WEB SECURITY

Provide a safe Internet experience for all the people within your organization.

EMAIL SECURITY

A cloud based solution to keep your organization safe from email threats.

IDENTITY

Single shared identity store fully AD integrated.
