CHOICES TO MEET YOUR BUDGET AND NEEDS

With a variety of options, you can choose the best FTP server to meet your security requirements, and your budget.

> IT's job is never easy when it comes to file transfer. They must provide a secure file transfer solution that guards against data breaches, yet one that eases the compliance burden and meets corporate governance requirements. Administrators must also make highly sensitive data available to employees and business partners, including sales information, health records, credit card information,earnings statements, intellectual property, and more.

Introducing WS_FTP Server

WS_FTP Server is the proven, scalable, secure FTP server preferred by thousands of organizations and millions of users today. With broad features demanded by today's businesses and the security for the most sensitive data, WS_FTP Server is the most comprehensive FTP server in the market. WS_FTP Server is easy to install and use, and is the number one choice for those who need to keep their data on site.

Trusted choice

WS_FTP Server has a proven track record of reliability and security, having transferred and protected the most confidential information in security sensitive industries for over 20 years. Tens of thousands of customers and millions of users around the globe trust WS_FTP Server.

Features demanded by today's businesses

WS_FTP Server is the work horse of many companies today: used to store, share, and transfer information between systems, applications, groups, and people. To get this work done requires a rich set of protocols, high availability, strong security, visibility and control that only WS_FTP Server offers.

Security for the most sensitive data

Your data demands the latest in security, so WS_FTP Server uses a broad, secure set of protocols for file transfer and encryption, including FTP, SSH, SCP2, 256-bit AES encryption over SSL, OpenSSL 1.0.1h and FIPS 140-2.

Easy to install and use

Despite its power, WS_FTP Server installs easily and can be up and running quickly. WS_FTP Server takes little time to manage and alerts you when there are issues you need to address.

Keeping your data on-site

WS_FTP Server's architecture keeps your data on-site, letting you securely share information with people and partners inside and outside of your organization.

WS_FTP Server Options

Now with three different WS_FTP Server options, end users can quickly, easily, and securely transfer files to WS_FTP Server, share files with other people, or achieve highly available file transfer service.

› **Ad Hoc Transfer module** lets users send files securely to one or more individuals by sending an email via a Microsoft® Outlook® plugin (2010 and 2013) or their web browser. With this module, organizations can improve the way they manage file transfer interactions and apply encryption, access control and authentication, digital loss prevention, and content management.

› **Web Transfer module** enables employees and external business partners to transfer files, data and other critical business information securely between their computers and the WS_FTP Server over HTTPS using a web browser.

› **The Failover option** ensures high availability by deploying a second WS_FTP Server in a failover configuration. This is especially important in meeting service-level agreements or ensuring that other mission-critical processes are always up and running. With failover, organizations can ensure uninterrupted file transfer service for increased uptime, reliability, and performance.

See for yourself why tens of thousands of customers and millions of users around the globe trust WS_FTP for its security, quality and reliability.
