

Nuix Information Governance Solutions

Powered by the patented Nuix Engine and the Nuix Luminate platform

Find facts fast in a sea of unstructured data

Nuix Information Governance solutions, built on the patented Nuix Engine, enable active governance through Information Transparency™. The Nuix Engine thoroughly and efficiently indexes unstructured human-generated data to give you deep insights into its content and context. This enables you to make informed governance decisions and act on them.

Why unstructured data is important

Enterprise information is growing at unrelenting speed. The volume of data has extended far beyond the capabilities of traditional governance approaches to managing information.

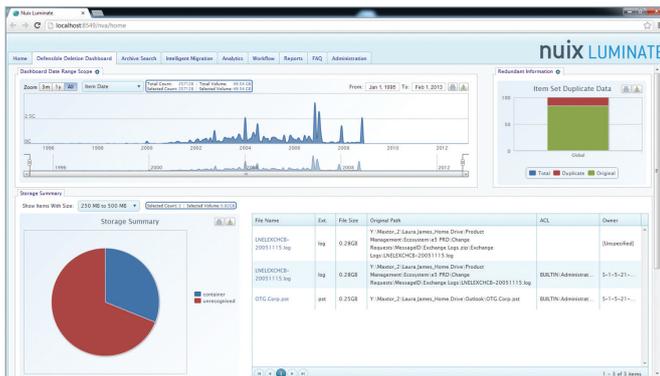

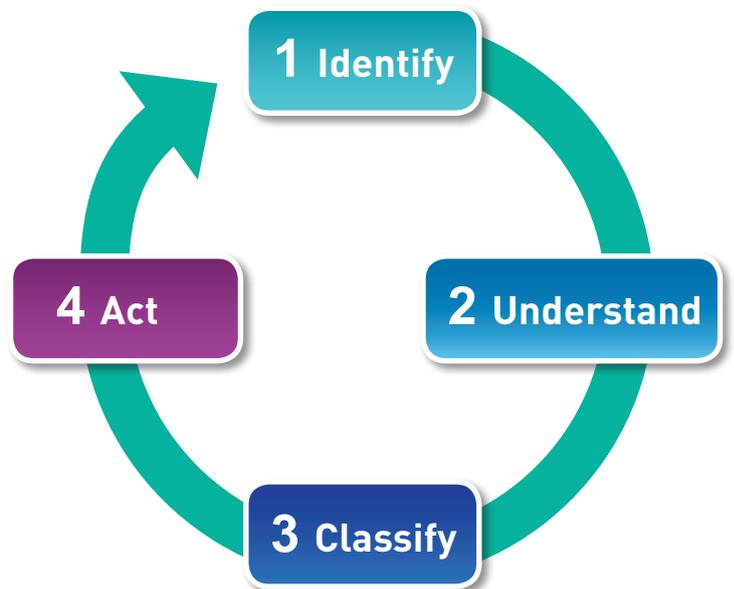

Informed governance decisions rely on facts. However, the facts about unstructured information – which represents roughly 80% of a typical enterprise's information stores – are extremely hard to obtain in a timely, cost-effective and scalable way.

Many organisations ignore this issue until they face a 'trigger event' such as litigation or regulatory action. Only then do they find they cannot respond quickly, confidently or cost-effectively to information requests.

A UNIQUE TECHNOLOGY ADVANTAGE

The Nux Engine indexes unstructured data at massive scale and with unmatched speed. Nux Luminate harnesses these capabilities to provide visibility into data stored in archives, email and collaboration systems, file shares, hard drives and other common repositories. Our software makes timely and cost-effective information governance a reality by delivering:

- The ability to deeply index up to 100 million emails and documents per day even in complex storage systems such as email archives and compliance storage repositories.
- A light metadata scan that enables you to quickly triage tens of terabytes, thus targeting your efforts right away.
- In-depth data analysis including entity extraction, fingerprinting, file true typing and access control list capture and review.
- Dashboards and reports you can use to pinpoint threats and opportunities, and gain internal support for action.

The Nux Luminate dashboard presents a high-level overview of all your data.

High Risk Information				
	Category	Type	Count	Volume
	Personal Information	Personal ID # in email	37	37.23 mb
	Personal Information	Credit card # in external email	1	24 kb
	Personal Information	Personal ID # in external email	12	0.19 gb
	Personal Information	Credit card # in file with open ACLs	0	0 kb
	Personal Information	Personal ID # in file with open	0	0 kb

Identify high-risk data at a glance.

Proactive information governance

Nux technologies make it possible to govern unstructured data consistently using a four-stage process:

- 1 Identify** the content and context of unstructured information scattered across myriad storage locations throughout the organisation – thus achieving Information Transparency™
- 2 Understand** the age, ownership, format and content of each item using the unique capabilities of the Nux Engine – making it possible to develop governance strategies
- 3 Classify** content based on informed governance decisions that take into account the needs of all relevant stakeholders
- 4 Act** on those decisions by optimising storage systems; classifying, migrating and protecting data; or making it more readily available to the business.

INFORMATION GOVERNANCE IN ACTION

A Fortune 500 company with more than 7000 employees globally embarked on an enterprise-wide initiative to improve collaboration and get better control of unstructured content in its storage systems.

A critical part of this project was identifying documents related to new product development and migrating them to a Microsoft SharePoint collaboration system. Across approximately 10 terabytes of file share data, the gold mine the company sought was 10% of documents related to product development.

Working with a major content management consultancy, the company used Nuix Information Governance tools to index the file share data, understand its contents, classify the product development documents and migrate them to the SharePoint system.

By applying Nuix's Information Transparency™ capabilities, the company was able to:

- Create a migration strategy closely aligned to its business needs because it was based on evidence found in the existing content.
- Identify and prioritise very high-value content that was frequently accessed or modified by multiple users, or was duplicated across functions.
- Extract detailed metadata from documents and tag the extracted files with this information to streamline the process of importing them into SharePoint.
- Eliminate large numbers of duplicated, irrelevant and low-value documents from the migration.

TAKE TARGETED ACTION WITH INFORMATION TRANSPARENCY™

With Nuix, your organisation can develop and execute information governance programs that:

- **Improve and align business processes** by making unstructured information more accessible, searchable and useful across the organisation.
- **Contain costs** by optimising data storage and disposing of information that has no current business value.
- **Mitigate risks** by protecting vital information while identifying and managing potentially dangerous data.
- **Ensure compliance** by securing private and other risky data, and consistently enforcing retention rules.
- **Expedite confident and consistent responses** to litigation, audit and investigation.

LUMINATE CONTENT ASSESSMENT

Are you looking to set up an information governance project or program? Do you need benchmark data to justify moving to a new archive or enterprise content management system? Are you keeping more data in your file shares than you need and use? Do you worry about private information lurking unprotected in dark data?

A Nuix Luminate Content Assessment can provide you with the insight required to make business decisions based on facts rather than perceptions. A content assessment can tell you:

- Where your organisation has opportunities for data clean-up, reorganisation and risk mitigation
- How big these issues are and how much investment is justified to acquire new technologies or functions

- If you need new technology or program elements such as policies, definitions, SharePoint add-ons and to estimate storage growth
- How much content you need to capture, manage or remove.

A Luminate Content Assessment – performed by a Nuix partner on a sample set of your data – is a low risk and cost effective way to find these answers.

INFORMATION GOVERNANCE SOLUTIONS

From our experience conducting projects with customers and partners worldwide, Nuix has developed a growing range of information governance solutions. They combine the Nuix Engine's unique abilities with Nuix Luminate's dashboards, workflows and reports built around real-world use cases – and are delivered through specialist advisory, IT, legal and litigation support partners.

Luminate Content Assessment

The essential first stage of any information governance initiative is to understand your data, identify risks and value and prepare a business case to prioritise, plan and justify your next steps.

Privacy Monitor

Ensure personally identifiable information, personal health information, credit card numbers and other high-risk data are stored with appropriate encryption and access controls.

Intelligent Migration

Understand the contents of legacy archives and file shares, migrate them rapidly to the cloud or next-generation storage systems and leave behind duplicate, outdated and trivial data that has no business value.

Merger, Acquisition and Divestiture Support

Provide assurance for information assets and maintain confidence before a transaction, then leverage acquired information and divest assets you no longer own afterward.

Archive Search

Bypass legacy archives' slow and inaccurate native search to make their contents fully searchable and easy to extract for eDiscovery, regulatory requests and other business purposes.

About Nuix

Nuix enables people to make fact-based decisions from unstructured data. The patented Nuix Engine makes small work of large and complex human-generated data sets. Organisations around the world turn to Nuix software when they need fast, accurate answers for digital investigation, cybersecurity, eDiscovery, information governance, email migration, privacy and more.
