

Nuix Corporate Discovery

BIG INSIGHTS INTO YOUR ENTERPRISE'S BIG DATA

The growing volume and variety of data is overwhelming organisations worldwide. Around 80% of the data enterprises store is in unstructured, user-generated formats – in archives, content management systems, email databases, file shares, outdated systems and personal devices – on premises and in the cloud. Corporate IT departments often know where this data is but rarely have good visibility into its content.

This can become a costly problem for organisations when they're faced with litigation, regulatory action, compliance reporting, internal investigation, data management and other tasks that require rapid, accurate assessment of the facts.

Nuix Corporate Discovery packages our best information discovery solutions, harnessing the power of the patented Nuix Engine to give you transparency into your big unstructured and structured data no matter where it lives.

Nuix's technology helps IT, legal, investigation, compliance and security teams to work together to collect, process and review data behind the firewall.

In the time it takes other technologies to count how many relevant items you have, Nuix makes all the evidence available for search, analysis and review. This means IT specialists can support legal, investigation or risk teams to find relevant facts when they need them and mitigate risks before they become problems. It removes unnecessary and costly delays in the discovery process and minimises the disruption of day-to-day technology management activities.

HOW CAN WE DO WHAT WE DO?

The Nuix Engine uses a patented parallel processing technology to index and search unstructured data at the binary level with unmatched speed and forensic rigour. Nuix supports hundreds of file types and processes the formats enterprises use to store their data including:

- File shares
- Email servers
- Email archives
- Cloud repositories
- Microsoft Exchange, Exchange Web Services, SharePoint
- Mobile devices.

Process data faster than any other technology

Using Nuix technologies, you can complete discovery and information management tasks on vast, complex data sources faster than any other technology. Nuix processes data in its native format in archives, email systems, file shares, hard drives, forensic images and other common repositories.

Gain better visibility into your data

Having all the facts at your disposal, you can quickly and comprehensively answer the fundamental questions of any matter: is the claim true, what is your risk exposure, do you want to pursue it and what strategy will you take.

Create and automate workflows

Nuix's web applications enable legal teams to create and automate workflow templates that other staff members can use to complete discovery tasks efficiently, repeatably and defensibly.

Redefine collaboration

With Nuix you no longer have to choose between doing everything internally or outsourcing to an external vendor. Working from a single case file, internal and external legal teams can collaborate on culling, searching and analysing data and divide up stages of large, complex processes. A Nuix case file is the de facto standard – nine of the world's ten largest litigation support vendors use our technology.

One solution for many tasks

You can install our highly portable software behind the firewall, in the field or on cloud infrastructure – wherever your evidence is located. Because all of our technologies work from a single Nuix case file, internal teams can access enterprise data faster, in a task-specific interface, without moving or converting data from one tool to another.

Bridge the gap

With Nuix, you can progress rapidly through the discovery workflow using a common case file format, eliminating the delays and complications of moving data between tools. What's more, IT teams, forensic investigators, general counsel and litigation support vendors can share the workload by working from the same Nuix case file.

Avoid duplicating efforts

Heavily regulated or litigated organisations often collect data from the same custodians or data sources. Nuix's 'living index' technology maintains a reusable and regularly updated index of these custodians' emails and files, enabling your legal team to quickly understand the impact of the latest claim or regulatory request without the delay of processing the data.

Strengthen your information governance strategy

Organisations can use the insights obtained from their unstructured data to make the case for information governance programs that improve and align business processes, contain costs, mitigate risks, ensure compliance and expedite confident and consistent responses to future litigation or other events.

Nuix Corporate Discovery is a powerful solution that enables direct processing from the industry's widest variety of data formats including enterprise email systems, archives, file shares, hard drives, forensic images and mobile devices. This flexible software licence allows you to conduct multiple jobs in parallel or pool your resources to tackle the largest data sets and gives you a choice of desktop or web interfaces. Inside the suite, we've included:

NUIX WORKSTATION

Nuix Workstation, our traditional interface, is a desktop application for IT, eDiscovery and investigation specialists. It provides direct, fine-grained control over all functions of the Nuix Engine, from forensic deep dives to eDiscovery productions.

NUIX DIRECTOR

Nuix Director is a web application with automated, template-driven workflows, comprehensive reports and an easy-to-read dashboard. Nuix Director allows you to complete eDiscovery tasks efficiently, repeatably and defensibly without being the resident expert.

NUIX WEB REVIEW & ANALYTICS

Nuix Web Review & Analytics is a powerful application that delivers fast, collaborative early case assessment and eDiscovery review from any web browser.

NUIX LEGAL HOLD

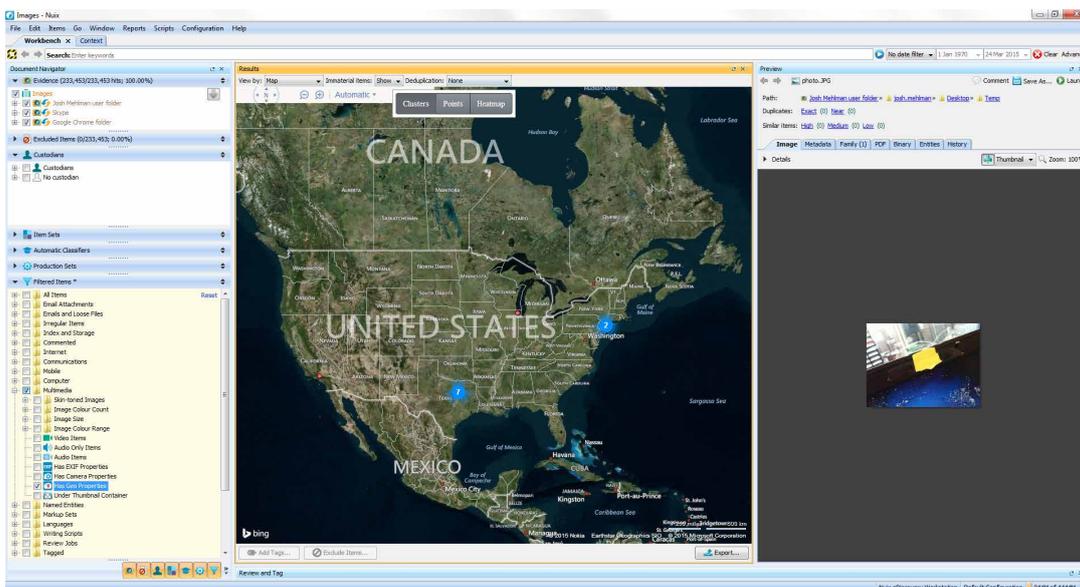

Nuix Legal Hold is a fast, efficient and defensible solution for legal hold notification and compliance tracking. It automatically records each custodian notification and compliance acknowledgement with time stamps for a complete, defensible audit trail.

NUIX ENTERPRISE COLLECTION CENTER

Nuix Enterprise Collection Center automates the forensic collection of large quantities of unstructured data from multiple locations and sources, including file shares, hard drives and Microsoft SharePoint. Partnered with our Legal Hold solution, in-house counsel can trigger it to collect as required as part of a defensible preservation process.

TRAINING AND INSTALLATION

Learn how to make the most of Nuix Corporate Discovery with expert support and training – from installation through to common workflows – for your key internal teams such as legal, IT, compliance or HR.

NUIX SUCCESS

FINANCIAL SERVICES

A global financial institution frequently required internal data collection and investigation in response to regulatory action and litigation. The bank insourced large volumes of work it used to send out to external providers. Nuix software provided an unmatched ability to collect, process and analyse large volumes of data within a reasonable time.

Results

- Reduced data retrieval times from weeks to hours
- Cut spending on external processing and hosting services by tens of millions of dollars per year
- Paved the way for proactive data minimisation and information governance.

MANUFACTURING

A multinational electronics manufacturer needed to collect, cull and search data belonging to 15,000 employees in its South Korean office, in relation to a major lawsuit. The company engaged Nuix to process, search and export the data which was in more than 50,000 Lotus Notes NSF files and in a combination of English and Korean languages.

Results

- Nuix's parallel processing completed the task within six months
- Nuix was the only technology that could natively handle Lotus Notes and double-byte Unicode character sets
- The company is now examining auto-classification, clustering and other analytics technologies to cull data.

RETAIL

A major American sports equipment manufacturer struggled to extract data from an ailing legacy archive platform for eDiscovery. Email archive searches were not precise or timely and often failed and needed to be re-run. Unable to meet production deadlines for court and outside counsel, the company's legal team sought Nuix's help to increase eDiscovery efficiency by migrating 50 TB of data to Office 365.

Results

- Enabled the legal team to perform complex searches for users and custodians
- Transferred older open cases to use with Nuix eDiscovery tools
- Produced data from the legacy archive with fewer errors.

ABOUT NUIX

Nuix enables people to make fact-based decisions from unstructured data. The patented Nuix Engine makes small work of large and complex human-generated data sets. Organisations around the world turn to Nuix software when they need fast, accurate answers for digital investigation, cybersecurity, eDiscovery, information governance, email migration, privacy and more.
