

Safend Reporter, the knowledge to control

The power you need to prevent data leakage

Giving you the knowledge you need to prevent data from leaking out, the Safend Reporter provides full statistical and indepth information about your company's endpoints.

Designed as a compliant solution, the Reporter already answers to Sarbanes Oxley, (SOX), HIPAA, PCI, FISMA, BASEL II, UK Data Protection Act (DPA) and other stringent requirements.

Part of the Safend Data Protection Suite, the Reporter automatically pulls strategic and periodic information into reports and distributes them to defined recipients. Pinpointing intentional and unintentional misuse, the Reporter can generate both built-in reports and those customized by the Administrator. Easily understood, each report is set in a comprehensive interface and has a number of drill-down options. Generally arriving as a .pdf file, Safend reports can also be exported into other recognized formats.

Safend DPS, the Data Protection Suite

More knowledge, more information, more control

- Reports on intentional and unintentional security events / suspicious activities per users and groups
- Reports on different types of security events and number of attempts
- List of all security policies used in the organization
- Reports on organizational computers and device endpoints
- High-level and detailed information on an endpoint's encryption status
- Device usage over a defined time
- Scheduling reports
